Purpose:
Carrying out procedures of cascade plasmafiltration, membrane plasmapheresis, hemosorption, plasmasorption.

Advantages of “HEMOFENIX-M” device:
- possibility of carrying out several kinds of extracorporeal hemocorrection procedures;
- completely automatic plasmapheresis procedure;
- wide range of procedure parameters;
- constant automatic control of parameters;
- patient’s and personnel safety;
- convenient usage;
- portability.

Main characteristics:
- Blood, saline and infusion solutions capacity regulating range from 0 to 200 ml/min;
- Proportion of anticoagulant capacity and stated blood capacity range from 1/40 to 1/10;
- Regulating ferrule pressure range from 0 to 70 mm of vacuum;
- Control of vacuum, created during the blood intake, from 0 to 100 mm of vacuum;
- Plasmafilter’s input pressure stabilization range from 50 to 250 mm of vacuum.
